Enchanting

ONE SURFACE.

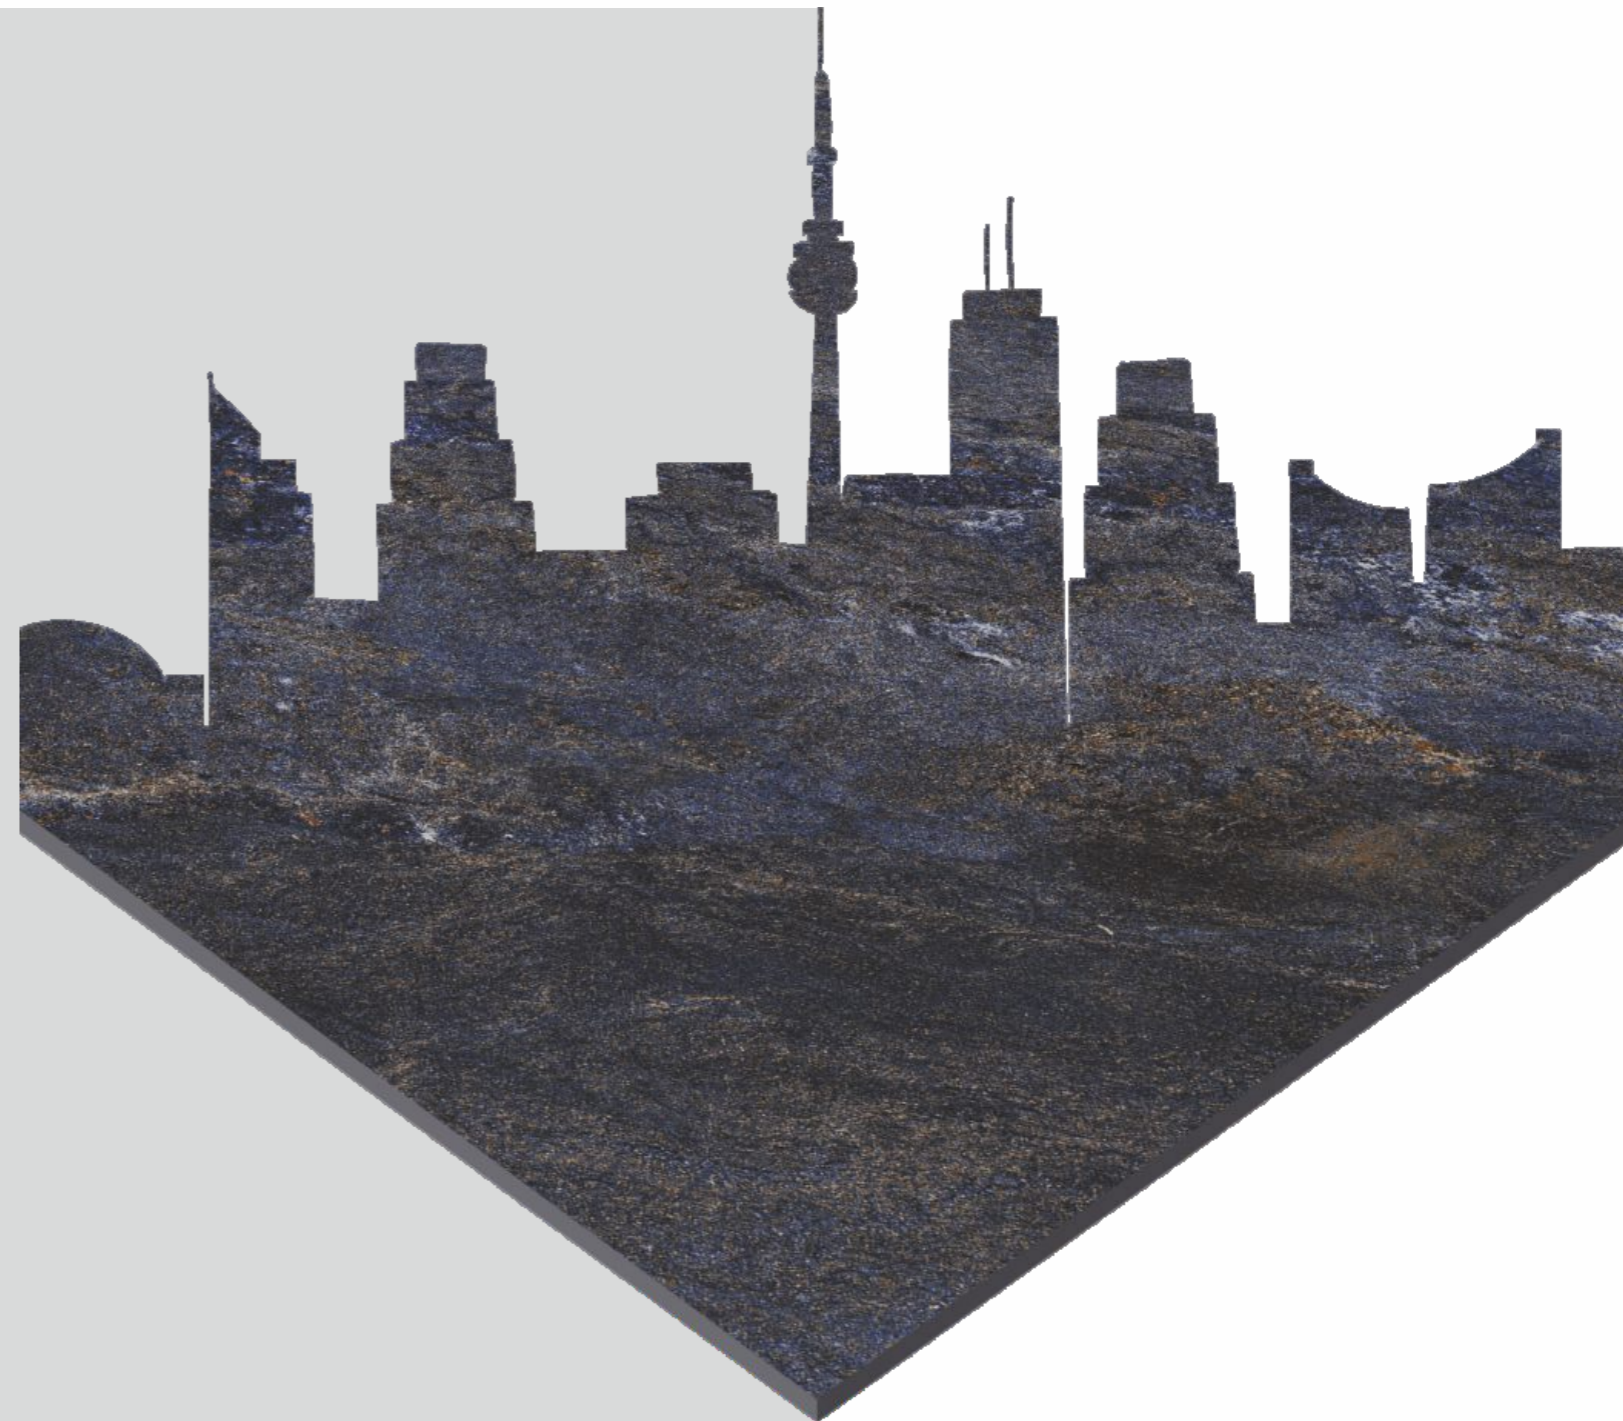

The CERA GVT Collection is no ordinary set of tiles. Inside each box of these tiles, lies an opportunity - to think out of the box. It's one surface, with the talent of several.

MANY SHADES.

The only predictable aspect of this collection is that it's unpredictable - just like how designs in nature never cease to enchant us, surprise us. Warm grains of wood? Done. Charm of Natural Stone? Done. The stately grace of Marbles? Done. The CERA GVT collection muses upon nature, and surpasses it in performances.

ENDLESS POSSIBILITIES.

It's a collection that talks about the freedom of choice and truly means it. Picture 4 different sizes - 80x120, 60x120, 20x120 and 60x60 cm. Add to this there are 6 finishes and over 400 designs to choose from. It's collection designed to overwhelm the modern designer, with everything.

FOLLOW THE INSTRUCTION FOR RECTANGULAR/SQUARE CUTTING

- Ensure that at least 5 mm space is left between the edge of the slab and the point where the hole has to be made. The radius of the corners must be a minimum of 3 mm.

- Angles cut without necessary radius length create a stress point, whereas the large radius maintains the structural resistance. Make sure to never leave the corners with 90° angle cuts.

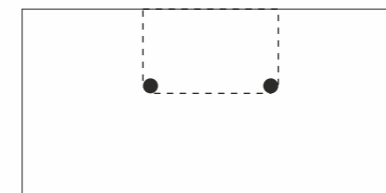

- Use a drill bit 3 to 5 mm to drill corners of the cut-out.

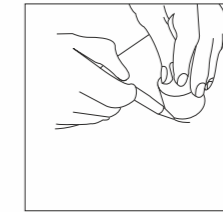

- Use a bridge saw running to cut from one hole to the next. Ensure the bridge saw is running at minimum speed to decrease the stress on the slab.

OTHER INSTRUCTIONS

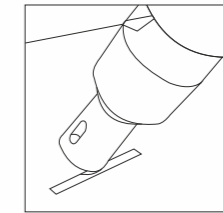

- When cutting a "U" shaped piece, mark and drill relief holes where the cut lines intersect, always make the shortest cut first.

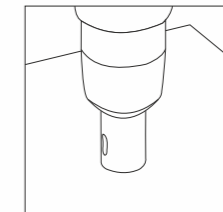

FOLLOW THE INSTRUCTION FOR ROUND CUTTING

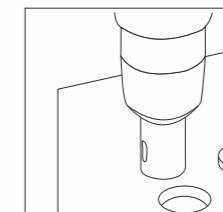

- Use the sticky tape and pen to mark a circle.

- Start at an angle of 45 degree slowly.

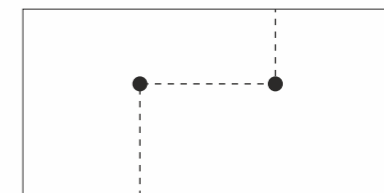

- Angle drill to vertical position 90 degree once round trace made.

- Slow down speed for exit holes.

WHAT TO AVOID

- Never cut the tile without using water
- Never cut the tiles without laying on sand carpet
- Never cut the tiles at a fast speed.

- When cutting an "L" countertop, drill relief holes where the cut lines intersect, always make the shortest cut first.
